Brief Introduction

Bie-modern is an innovative theory about the current social form and the stage of historical development in China, including reality of Bie-modern and Bie-Modernism. It is a philosophical thinking or a proposition, which farewell to Pseudo modernity and construct Real modern, and on base of these achieves differing modernity. Bie-modern theory is based on the difference between the western dynamical development model which start from pre-modern to modern and then to post-modern time, and the co-existence model of contemporary, pre-modern and post-modern time in China. Bie-modernism is the *Zhuyi* of self-renewal and realistic redemption. The reason why Bie-modern theories triggered a heated discussion in European philosophy is that they believe Bie-modern theories may break down the three imperialism of Western Philosophy, and lead to establish a new Philosophical Quadrilateral with china' s accession, and the phenomenon of Bie-modern is very close to Alain Badiou' s saying of *Philosophical moment*. American professors set up The Center of Chinese Bie-Modern Studies (CCBMS) ,and besides being very excited, they begin to analyze and comment on contemporary art works and art trends in United States by using the theory of Bie-modern.
